

SOLO PLANT · ORCHID CARE CARD

Cattleya

An epiphytic orchid from Central and South America that lives on trees in the wild. It is often fragrant, and its scent comes through most in daylight.

ORIGIN
Central and South America

AVAILABILITY
All year round; most widely in spring and autumn

FLOWERING TIME
2–3 weeks

TEMPERATURE
15–25°C

A note from Solo Plant Follow your orchid's needs, not the calendar. Check the moisture of the growing medium before watering, and never leave water standing in the outer pot.

Care at a glance.

Position & light
A bright spot out of direct sun.

Feeding
1× / month

Optional; monthly orchid food supports flowering.

Watering
1× / week

Once a week, soak the inner pot for about 10 minutes and drain it well.

Reblooming
When the flower has finished, it dries and falls on its own; there is no need to cut the stem. After flowering, simply continue the same care.

Temperature
25°
15°

15–25°C.

Repotting
If the roots are healthy, repot every 3–4 years in orchid medium. Remove any soft or rotten roots and replant in the same pot.
