

SOLO PLANT · ORCHID CARE CARD

Cymbidium

A terrestrial orchid: rather than relying on aerial roots like most orchids, it roots in soil and draws its nutrients from there. It is robust and fond of cool conditions.

AVAILABILITY
July/August–March

FLOWERING TIME
8–10 weeks

TEMPERATURE
12–21°C

Did you know? From April to October a Cymbidium can also live outdoors. Bring it in once the outdoor temperature drops below 10°C.

Care at a glance.

Position & light
Choose a bright spot, out of direct summer sun.

Feeding
1× / month

Give orchid food once a month.

Watering
1× / week

Once a week, dip the inner pot in water for about 3 minutes, let it drain well and return it to its decorative pot.

Reblooming
Cut the finished stem and keep the plant cool and bright. Above 10°C outdoors it can go outside to encourage flowering; once it drops below 5°C, bring it in and keep it in a cool room.

Temperature
21°
12°

12–21°C. The cooler it is, the longer the flowers last.

Repotting
Repot only when it outgrows its pot. Choose a tall pot and an airy potting soil, not a bark-based orchid mix.
