

SOLO PLANT · ORCHID CARE CARD

Phalaenopsis-type Dendrobium

Its name tells its story: in Greek “dendron” means tree and “bios” means life. In the wild Dendrobium grows on trees and rocks across much of Asia and Australia, from India and Thailand to New Zealand.

ORIGIN
Much of Asia and Australia

FLOWERING TIME
6–8 weeks

TEMPERATURE
15–25°C

A note from Solo Plant Follow your orchid’s needs, not the calendar. Check the moisture of the growing medium before watering, and never leave water standing in the outer pot.

Care at a glance.

Position & light
A bright spot out of direct sun, not too close to a radiator.

Feeding
2× / month (February–October)

Optional; orchid food twice a month from February to October gives the richest flowering.

Watering
1× / week

Once a week, give about 100 ml of water or soak the inner pot for around 10 minutes; drain it well.

Reblooming
Leave the finished stem on the plant for two more months. Then give your orchid about six weeks in a cooler spot with less water, until new buds form.

Temperature
25°
15°

15–25°C.

Repotting
If the roots are healthy, repot every 3 years in orchid medium. Remove any soft or rotten roots and replant in the same pot.
